

# 1 – Nuvolar assignment part 2 – Traefik proxy

AWS EC2 VM – U20.04 LTS

- VM services details:
  - Ubuntu 20.04 LTS with docker
  - All services but SSH are docker containers
  - Traefik does TLS termination with SSL certificate and redirects to api-gateway.
  - api-gateway redirects to other nuvolar microservices
  - Optionally – not implemented - Gitlab Runner Continuous deployment anytime a developer triggers a git change
